SUMMARY

Product engineer who designs and builds web products end to end, from user interviews and flows to the data model and production deploys. Built and runs Roomee, a live rental and flatmate-matching platform in four Moroccan cities, and ships products for US-market clients through Exploda. Focused on the decisions around the code: what to cut, what to measure, and what users see when things go wrong.

WORK EXPERIENCE

Product Engineer | Roomee (roomee.ma) *2026 – Present*

Independent product: a rental and flatmate-matching platform for students in Morocco, live in 4 cities in French, Arabic and English.

- Led the product end to end: interviewed students, tested builds with users, defined product principles, designed flows and UI, and removed features that did not earn their place.
- Built a compatibility-matching engine (Laravel, MySQL, Redis) that ranks listings and flatmates with confidence scores on partially completed profiles.
- Designed a request-before-chat flow with in-conversation visit booking and contract signing, using websockets and push notifications.
- Cut landing-page asset weight by 60% (4.2 MB to 1.7 MB) across three measured performance rounds; wrote 256 backend tests.

Software Engineer (Freelance) | Exploda *May 2026 – Present*

- **Path90 (path90app.com):** built a mobile-first PWA, case-manager dashboard and Supabase backend for a prison reentry program, delivered in 11 weeks.
- **Path90:** implemented offline task completion, row-level security, at-risk participant flags, scheduled push reminders and funder outcome exports (Next.js, TypeScript, PostgreSQL).
- **AutoAiConnect:** built the Firebase backend for a US car-equity app, including the equity engine, credit-based APR, 50-state sales tax, Stripe subscriptions and a streaming AI assistant.
- **AutoAiConnect:** owned the API contract with the Flutter team and turned client requirement changes into a gap analysis before implementation; 353 unit tests and 87 security-rules tests in CI.

Full-Stack Developer (Freelance) | Self-employed *Jan 2024 – Jun 2026*

- Delivered full-stack web applications for clients, from requirements to production deployment.
- Built REST API integrations and Python (Pandas, NumPy) data pipelines that automated manual reporting.

Customer Service Advisor | Foundever (Abbott project) *Dec 2025 – Mai 2026*

- Resolved technical issues on medical diagnostic equipment and translated troubleshooting steps into clear instructions for users.

SKILLS

- **Product:** user interviews, flows and wireframes, UI design, prototyping, defining product metrics
- **Frontend:** TypeScript, React, Next.js, Vue.js, PWAs, offline-first, i18n and right-to-left layouts
- **Backend & data:** Laravel, Node.js (Cloud Functions), PostgreSQL (Supabase), MySQL, Firebase, MongoDB, Redis, Python (Pandas, NumPy)
- **Tools & DevOps:** Git, GitHub Actions, Docker, Vercel, Railway, Stripe
- **Languages:** English, French, Arabic

EDUCATION

Bachelor's in Computer Systems Engineering | Supmti *2025*
